

Cushion Tire Forklift Parts

Cushion Tire Forklift Parts - Cushion tires are a solid tire with a smooth profile. Its' tread is bonded to a steel ring to be able to form the tire, and the tire is pressed onto a hub that is mounted to the forklift. These kinds of tires are suited for use in smooth floor warehouses and are available in various polyurethane or rubber compounds.

Consisting of polyurethane, a poly tire is an extremely solid tire. These types of tires are used instead of cushion tires when there is a higher load capacity than could be acquired with a cushion tire and such applications which need a lower steering effort. Poly tires obtainable in a range of hardness ratings in order to meet other individual application requirements. Orderpicker lift trucks and Narrow Aisle models will typically make use of small diameter poly tires for their outrigger load wheels.
