

Carriage Roller

Carriage Rollers - Carriage rollers are specially designed bearings which are used on lift masts so as to help them work in challenging environmental surroundings. Lift masts are normally subjected to shocks, oscillations, vibrations and high dynamic and static loads. This equipment is regularly exposed to environmental influences such as cold, heat, dust, moisture, contamination and aggressive ambient air. Hence, the guidance arrangements of lift masts have to be particularly tough and have a particular high load carrying capability.

Carriage rollers have been created as the solution for functioning in different environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts should be economical and maintain operational security while having the ability to deal with a particularly high load carrying capacity.
