

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is a device made out of top quality materials designed to endure the most demanding procedures and work environments. This particular piece of equipment could enable drivers to be able to maneuver the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the arms or the entire load in order to facilitate much more precise lifting and placement in a quicker and much more efficient way.

The only one of its kind blade pocket design enables operators to be able to securely sway the unit's blades without any worry of damaging the positioning cylinders. This could allow the worker the alternative to either execute independent or simultaneous blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into blade positioners on existing units.
